

DUPLEX D-TYPE STRAINER

1" – 4" NB

PLENTY®

D-TYPE DUAL BASKET STRAINER 1" – 4" (25 MM – 100 MM) NB

Duplex strainers are used for pipelines operating continuously incorporating twin chambers each rated for 100% capacity. An integral flow changeover valve permits basket removal and cleaning without interruption of flow. This range is designed to compliment the Simplex filters but allows the cleaning and replacement of baskets to be carried out without any interruption to the flow through the filter. Fixed stops are provided to indicate which basket is in use. A projecting flange from the changeover handle guards the cover of the basket in use, making it impossible to remove inadvertently.

STANDARD FEATURES

- Quick release covers eliminate the need for tools for maintenance
- Single lever action on changeover valve eliminates possibility of hydraulic lock and accidental interruption of the flow
- Fixed stops are provided to indicate which chamber is in use and a projecting flange from the valve lever guards the cover of the chamber in use to avoid the wrong cover from being inadvertently opened
- Quick release covers eliminate the need for tools for maintenance
- Basket area to pipe CSA of over 12:1
- Designed for pressure ratings up to ASME class 300 (51 BARG)
- Flow is from inside to outside of the basket to trap and retain debris

- Supplied with coarse perforated baskets (2mm as standard) or fine stainless steel inserts to give particle retention down to 45 microns

OPTIONS

- Pleated baskets for high filtration areas.
- Reinforced baskets for withstanding high differential pressures.
- Magnetic element assemblies.
- Flanged connection for drain, vent and ancillary connections.
- Steam, hot water or oil jackets.
- Supplied with ancillary equipment such as DP gauges and switches, valves for drains and vents.
- Available in gunmetal, duplex stainless steel or other special alloys.

* Screwed Version in Cast Iron only – Available with BSPF or NTPF parallel threads

Bosses G & H drilled and tapped only if specified for sizes 50 mm and below.

Dimension 'A' illustrates the maximum width of a valve lever swung across the filter body (where applicable).

A system of lubricating ducts is incorporated in the changeover (parallel plug) valve. This ensures that the valve is sealed against leakage and provides an inert barrier, which protects metal surfaces and reduces corrosion. The valve is sealed top and bottom by 'O' rings. The lubricant is supplied in stick form and is applied through a screw on top of the valve.
